

• Identification of Tree(s) And Description Of Works

- The below trees pictured in figure 1 are found at the rear of the building and are labelled T1-4.

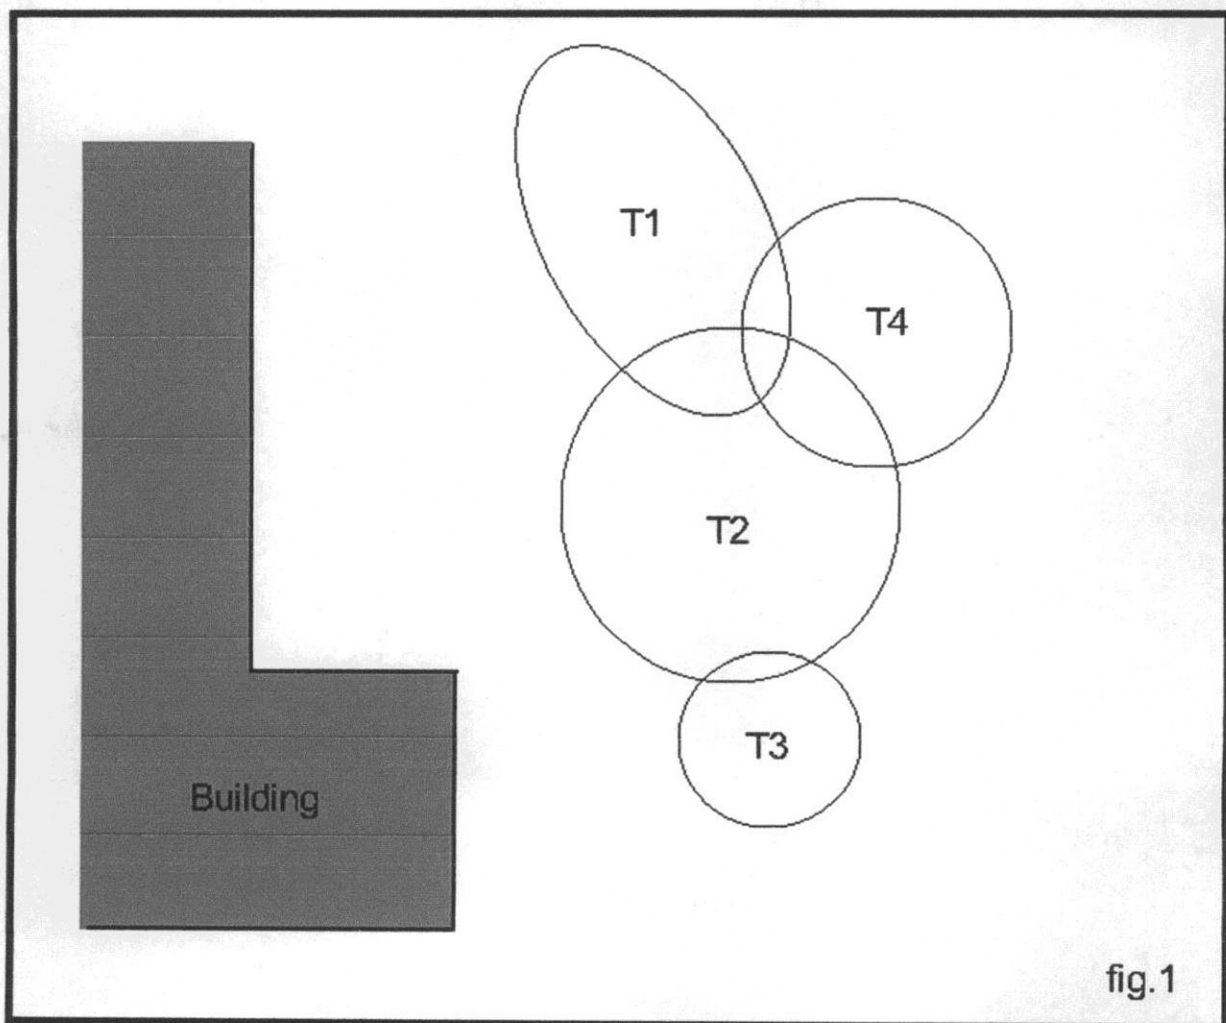

T1- A sycamore tree with heavy decay to the base which has resulted in severe decay.

T2- A sycamore tree whose growth has been heavily suppressed due to neighbouring trees. This issue could also be the result of construction stress.

T3- A sycamore tree that has developed an offshoot with a weak union to the major stem and includes bark as of present, this may be due to construction stress.

T4- A sycamore with major decay to the stem, approximately 8ft from the base.

The intended work with all trees involves safely felling and removing them from the site.
